CIA/RR EP 64-60

Additions to Capacity at Individual
Electric Powerplants in the USSR:
Actual 1963, Planned 1964

14 September 1964

S-E-C-R-E-T

GROUP 1

Excluded from automatic down-
grading and declassification

S-E-C-R-E-T

FOREWORD

The present compilation summarizes accomplishments of the electric power industry in 1963 and lists known or estimated additions to capacity at individual powerplants. It also presents similar data pertaining to plans for 1964.

The compilation has been prepared by the

25X1

Research and Reports, CIA, as a working aid.

It has not been coordinated with other intelligence components and is not intended to be an official CIA estimate.

Additions to Capacity at Individual
Electric Powerplants in the USSR:
Actual 1963, Planned 1964

I. Additions to Capacity in 1963

A. Over-all Accomplishments

	<u>Plan</u>	<u>Actual</u>
According to the Soviet press:		
Electric power production	407.9 billion kwh	412 billion kwh
New capacity to be commissioned	9.6 million kw	10 million kw
of which hydro	1.9 million kw	2.1 million kw

33 units of 100, 150, 200, and 300 mw each were installed in thermal powerplants, with a total capacity of over 5,000 mw.

At the end of 1963 there were 53 units of 150, 200, and 300 mw each installed in thermal powerplants.

	<u>End 1962</u>	<u>End 1963</u>
Total capacity	82,461 mw	92,853 mw
of which hydro	18,622 mw	20,730 mw

* The total capacity known or estimated to have been installed in individual powerplants adds up to 9,209 mw or 1,183 mw less than the total increase of 10,392 mw. However, in the past few years between 500 and 1,000 mw a year have been installed in small powerplants. The additions to capacity also include the rerating of units to the extent of 300-400 mw a year.

II. Planned Additions to Capacity in 1964

A. Over-all Plans for 1964

According to the Soviet press:

Electric power production	452 billion kwh
New capacity to be commissioned	
during <u>1964</u> and <u>1965</u>	21 million kw
of which thermal	18.9 million kw
hydro	2.1 million kw

36 units of 100-300 mw each will be commissioned in 1964, including:

6 units of 300 mw each

30 units of 100, 150, and 200 mw each.

It is planned to increase the capacity of operating power-plants by 400 mw through modernization.

	<u>End 1963</u>	<u>End 1964</u> <u>Estimated</u>
Total capacity	92,853 mw	104,044 mw
of which thermal	72,123 mw	82,500 mw
of which hydro	20,730 mw	21,544 mw

* It was stated in the Soviet press that 16 new powerplants will begin operation in 1964. However, analysis of the plant files indicates that 26 powerplants are scheduled to go into operation in 1964. The Soviet planners may be allowing for some of these plants to fall behind schedule, or may be counting only plants over a certain size.

** Approximate coordinates.
